Remote offices features

Allworx Business Phone systems work great if you have two or more office locations. For example, a office in Waukesha and a office in Milwaukee can be joined together by connecting the business office system in each location together. Using a common phone number customers can easily reach your employes in either location. This increases your companies efficiency and keeping better touch with your clients. The systems also work as one system over the Internet, when you transfer or access calls from site to site, you eliminate long distance charges. Remote employees can also use a Allworx phone remotely by simply plugging in their phones into the Internet and connecting seamlessly to the main office.
